

INSTRUCTIONS FOR TRANSPORT AND STORAGE OF THE KROP GUTTER SYSTEM

Long elements

1. Store and transport the drain gutters and pipes horizontally.
2. The first layer of long elements shall be stored on pallets supplied by the manufacturer, or on a flat surface, with pads in contact with them throughout their length.
3. Sharp or angular edges that come into contact with gutters or pipes should be protected during transportation and storage to avoid mechanical damage.
4. The permissible storage height of the long elements in the stack is 1 m.
5. Pipes and gutters should be stored in a roofed, dry place to protect against rain, moisture and excessive sunlight.
6. Pipes and gutters should be stored in their original packaging until the moment of installation.

Fittings of the gutter system

7. Cartons with moulded parts must be stored and transported under a roof cover.
8. Cartons should be stored in a dry room in order to protect against rainfall and moisture.
9. Avoid exposure to direct sunlight of fittings packed in plastic bags.

General rules

10. The unloading and loading of individual packages/cartons should be carried out manually with due care. Packaging must not be thrown or crushed.
11. During transport, the cargo should be immobilized with e.g. belts.
